

Global Health Seminar Series

Making an economic case for Egypt's population-wide screening for Non-Communicable Diseases (NCDs)

**Friday
30 July
2021**

**2pm – 3pm
SGT**

Zoom

Egypt has a much higher non-communicable diseases (NCDs) burden and mortality than the global average and faces more challenges in meeting SDG Target 3.4 on pre-mature death. Large-scale population-wide NCD screening campaigns and management is costly and challenging to implement. We aim to build an economic case for public investment by evaluating the cost-effectiveness of implementing the 100 Million Healthy Lives NCD screening campaign compared with the consequences of a counterfactual scenario of no screening over a 15-year time horizon. The study demonstrates the feasibility and economic value of public investment in NCD screening in Low- and Middle-Income Countries (LMICs).

Speaker:

Di Dong, PhD
Health Economist
Health, Nutrition and
Population Global Practice
Middle East and
North Africa Region
World Bank

Registration is open to all.
