AGING IS A DRIVER OF CHRONIC DISEASE

LIFESPAN EXTENSION AGENTS

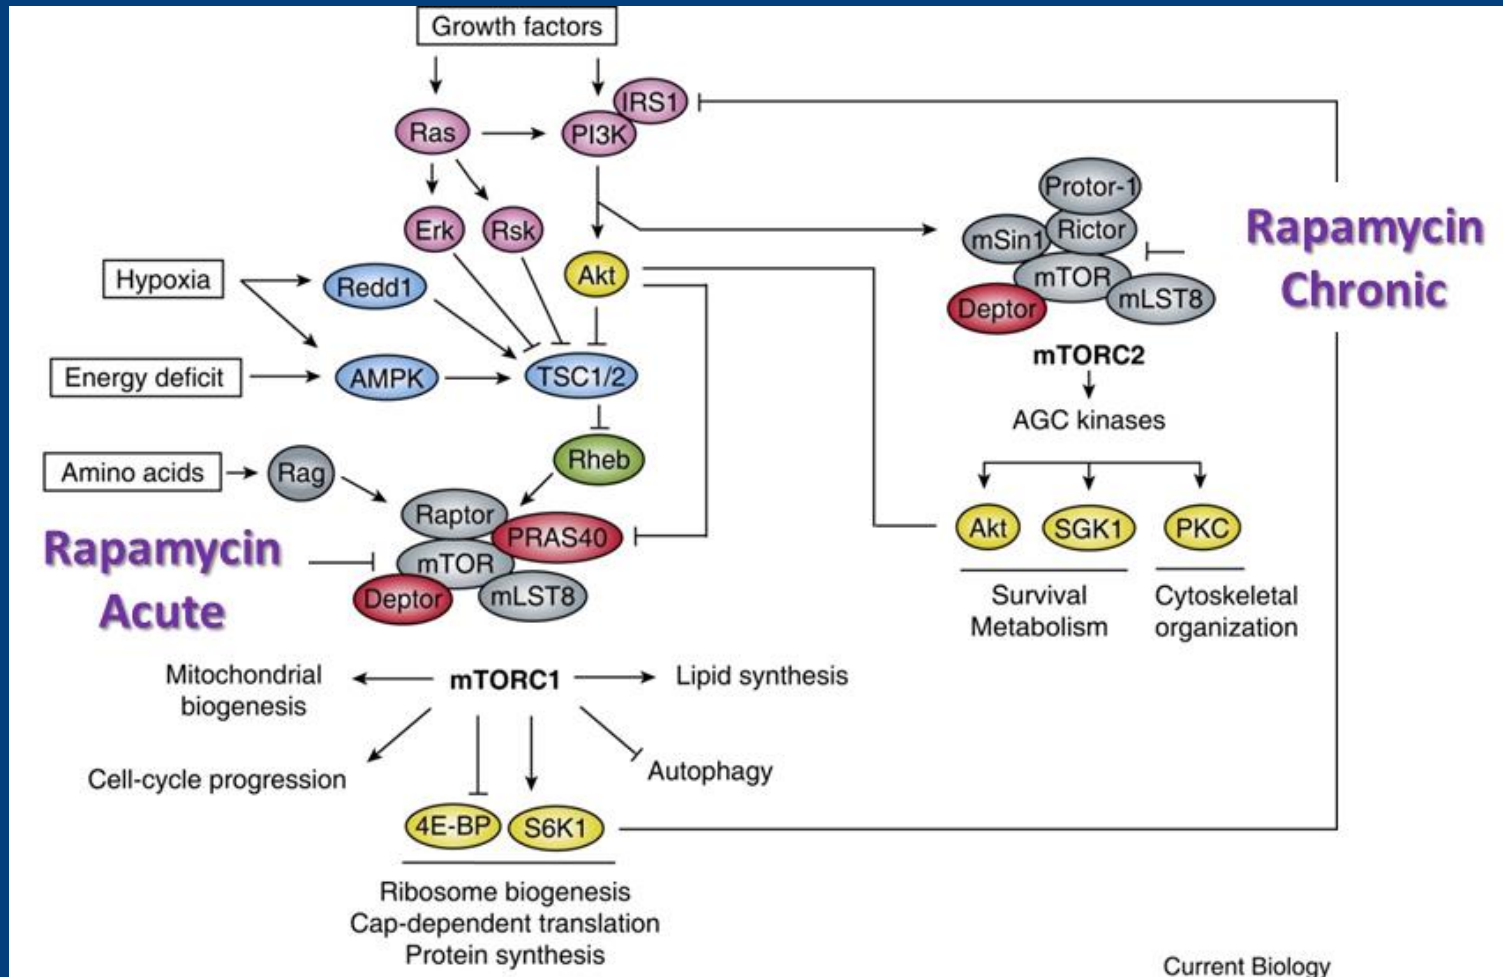

BEHAVIORAL

1. Calorie Restriction
2. Exercise
3. Intermittent Fasting
4. Alcohol??????

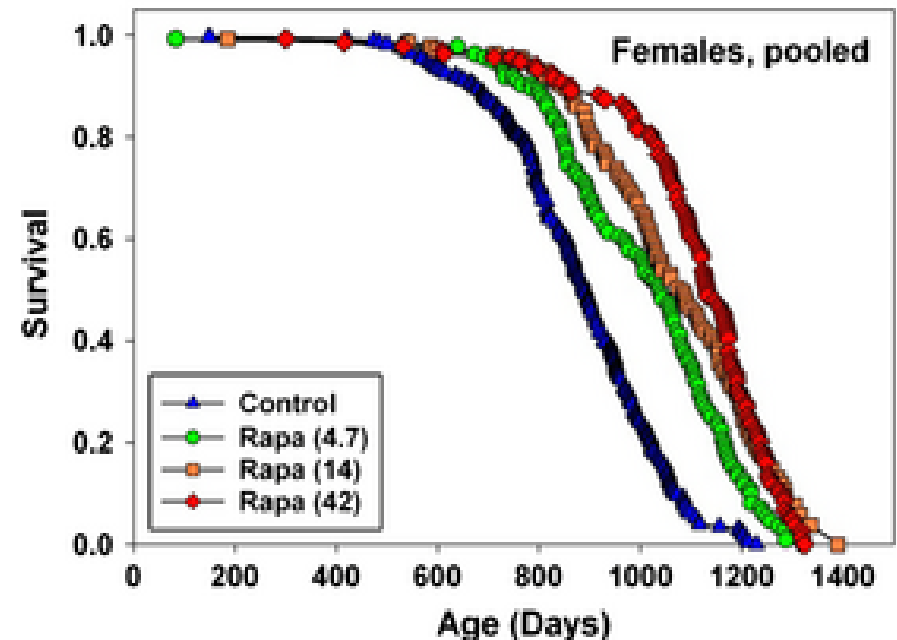

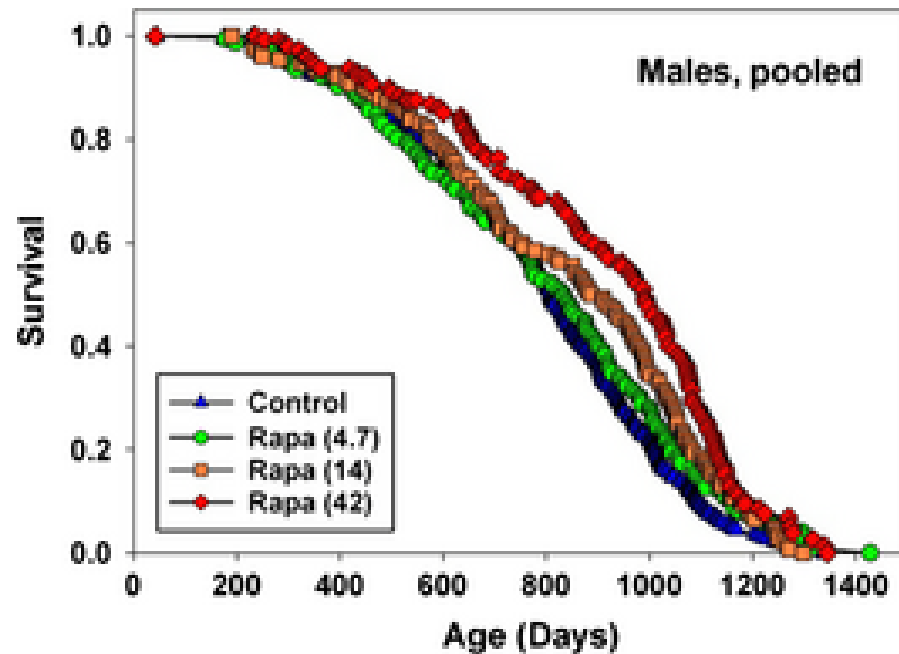

SMALL MOLECULES

1. Rapamycin
2. Metformin
3. NSAIDs
4. Acarbose
5. STACs (Resveratrol)
6. NAD Precursors
7. Factors in young blood
8. Senolytics

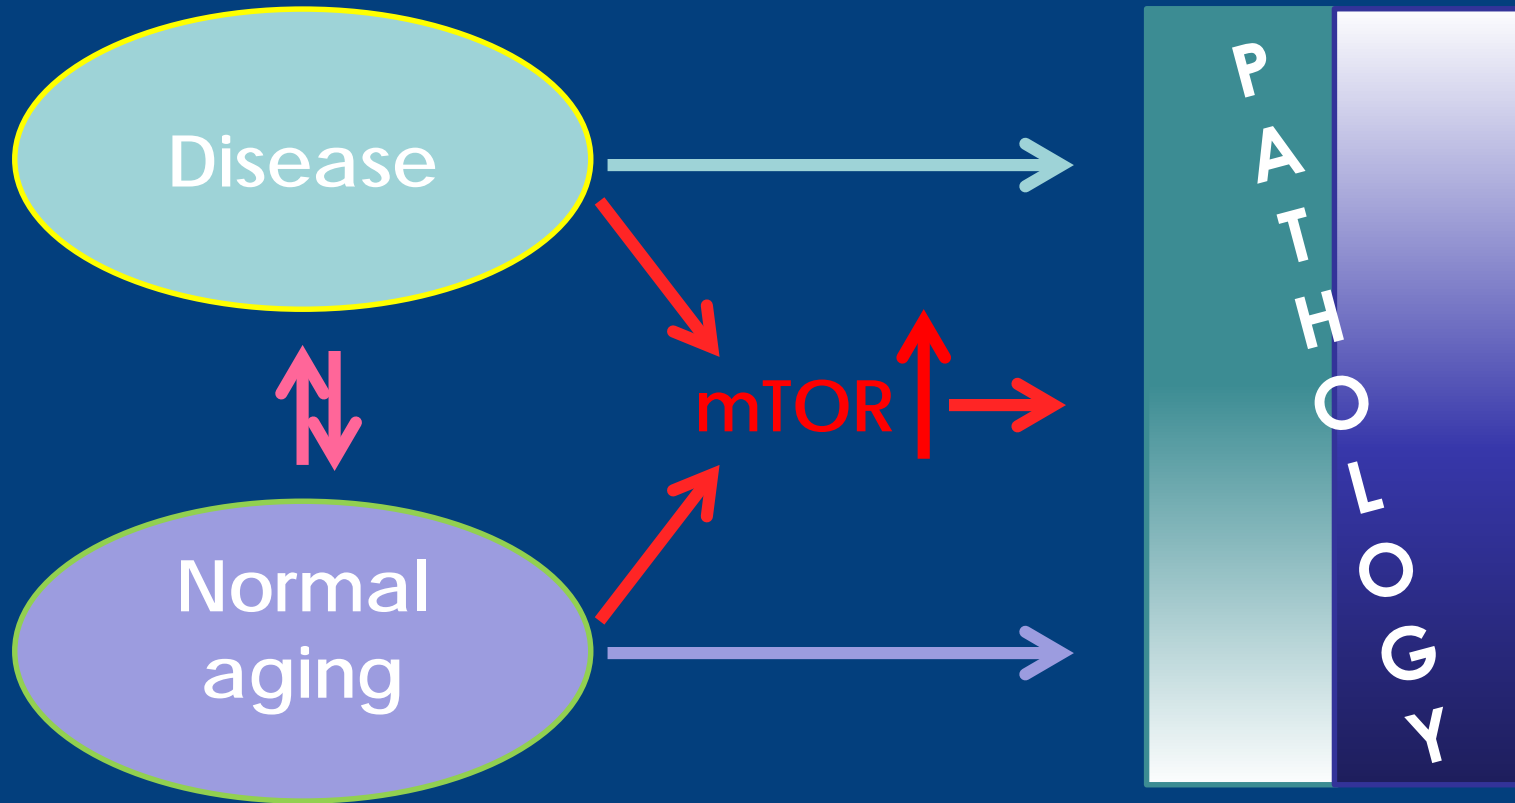

RAPAMYCIN

RAPAMYCIN IS DOSE DEPENDENT

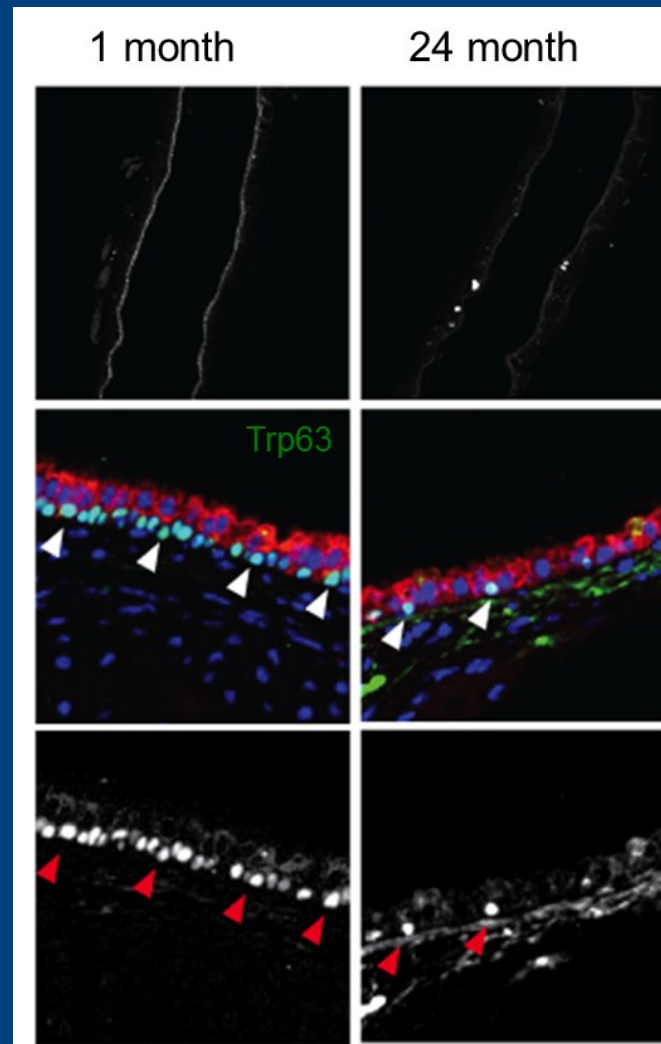

ABERRANT mTOR ACTIVATION

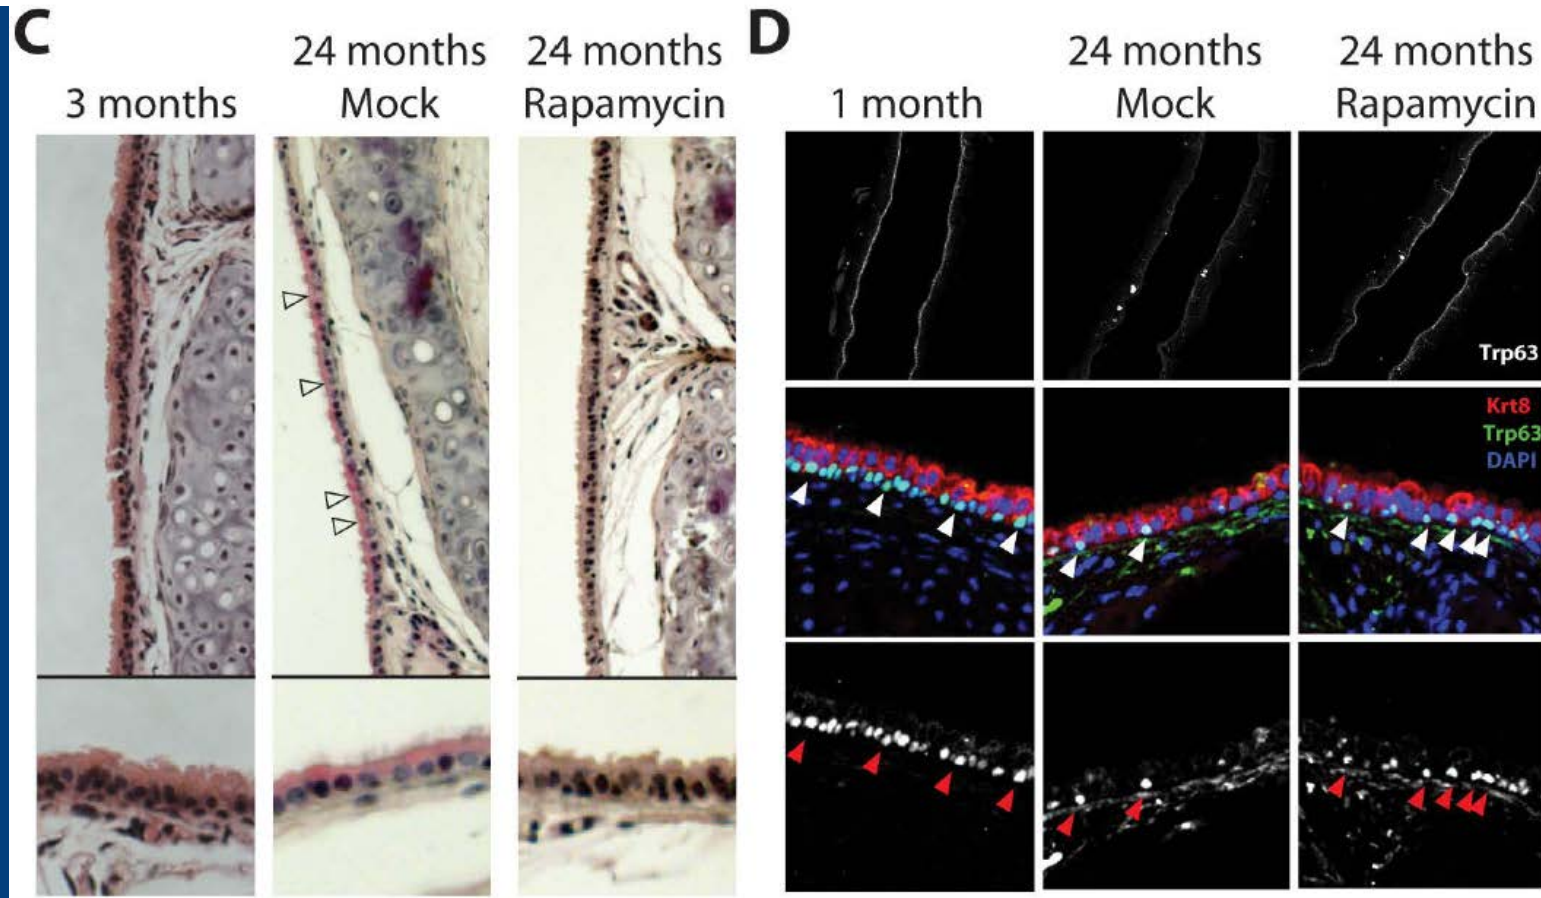

DEPLETION OF ADULT STEM CELL POPULATIONS AND mTOR SIGNALING

- **Tracheal Stem Cells (Henri Jasper)**
 - **Muscle Stem Cells (Jasper, Tom Rando)**
 - **Hematopoietic Stem Cells**
(Chen et al., Sci. Signal. 2009)
 - **Mesenchymal Stem Cells**
(Gu et al., Aging, 8:1102 2016)
-

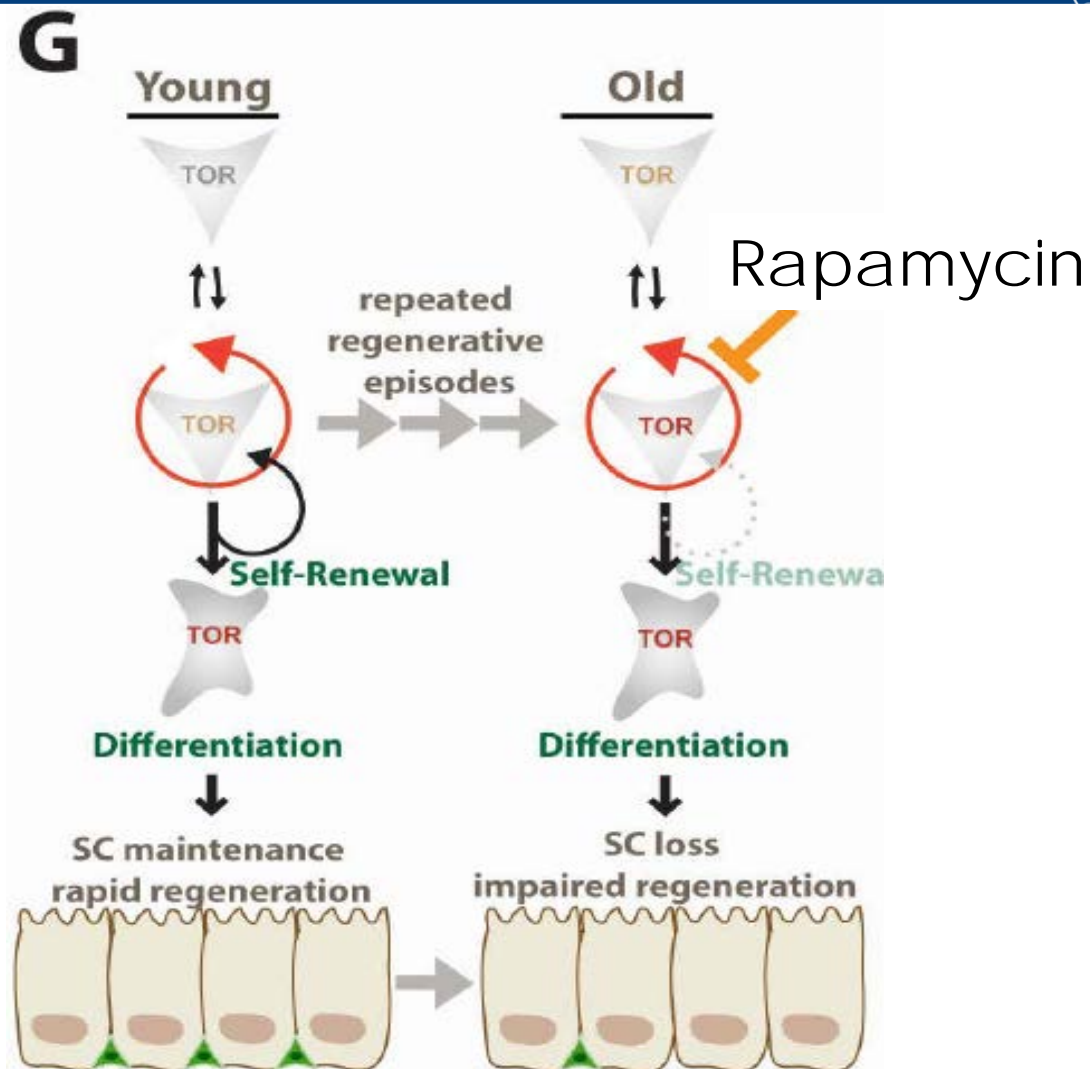

AGE-RELATED BC LOSS IN THE TRACHEA

RAPAMYCIN TREATMENT PREVENTS AGE-RELATED STEM CELL LOSS IN THE TRACHEA

mTOR AND AGEING STEM CELLS

PREVENT AND MANAGE

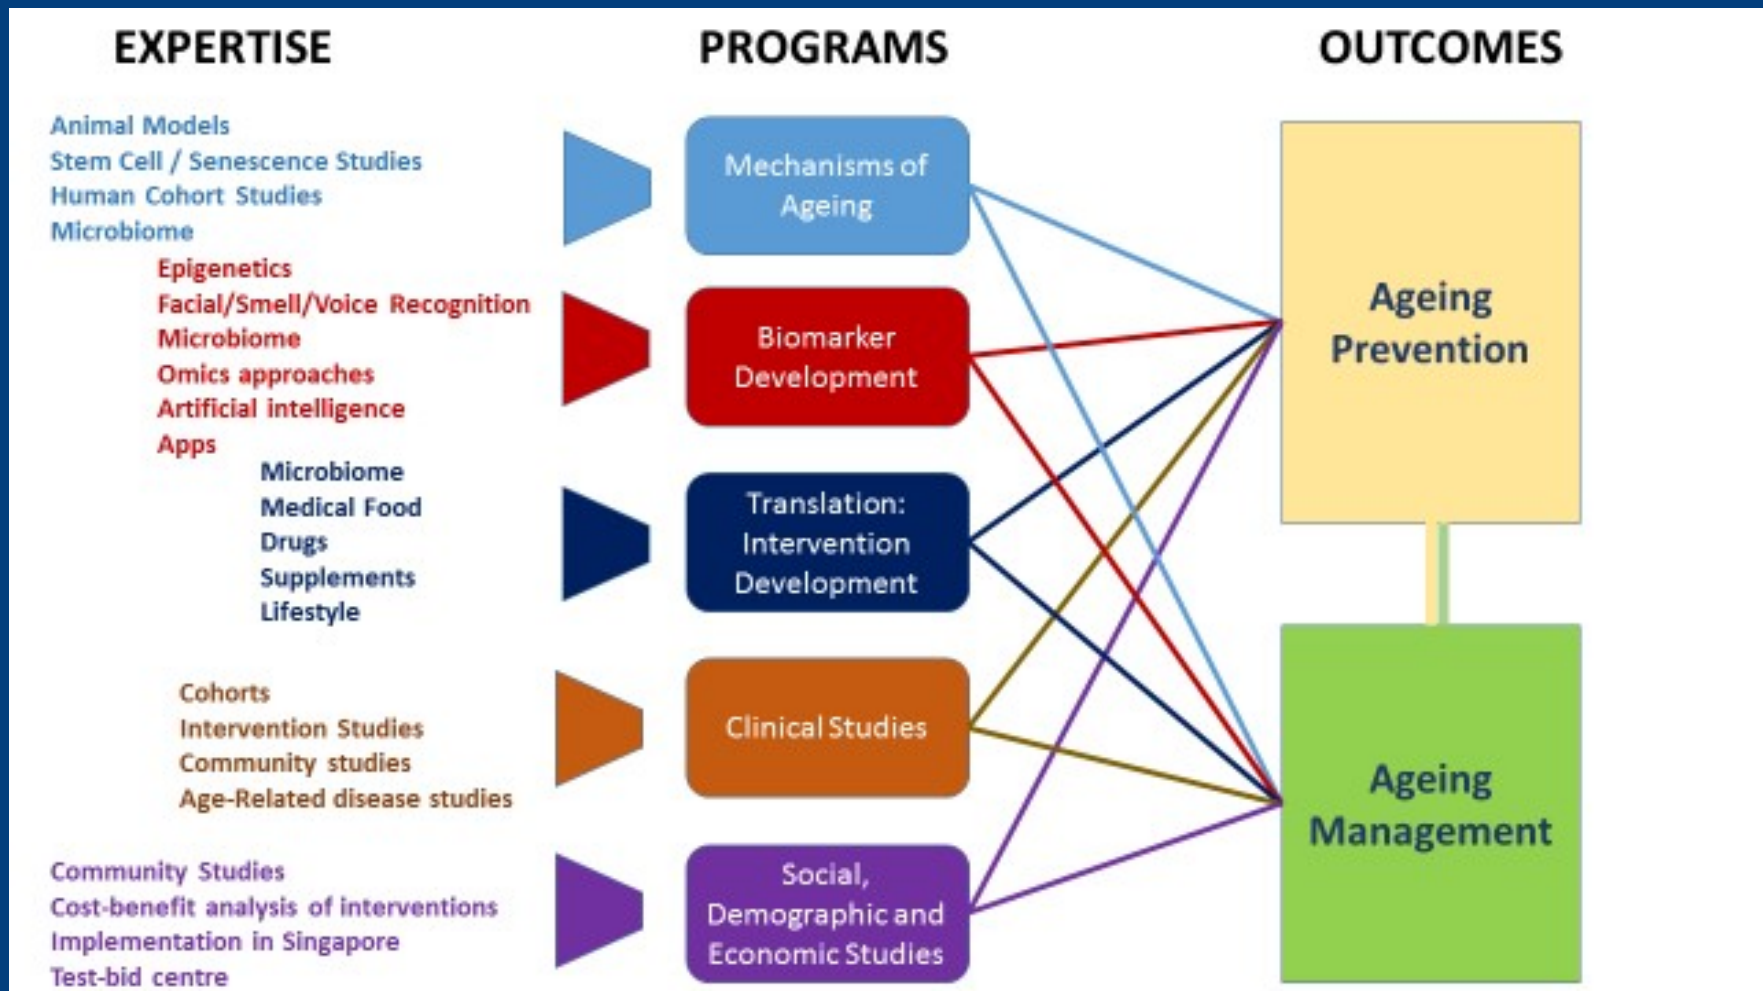

PREVENT AGEING

MANAGE AGEING

CENTRE STRUCTURE

HEALTHSPAN INTERVENTION TRIALS

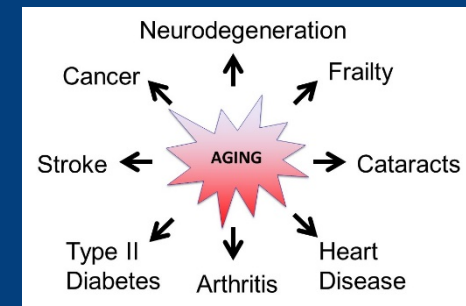

- Short-term studies to stratify interventions

- Biomarkers
- 50-65 years old
- 3 to 6 month interventions

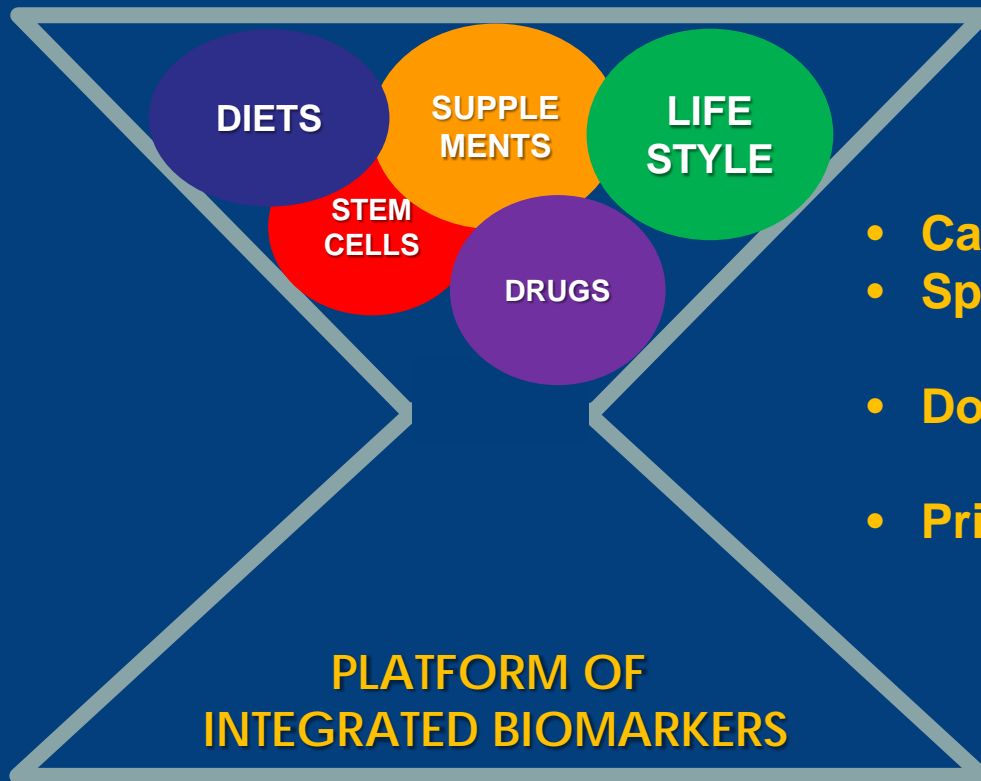

- Medium-term studies

- Multi-disease prevention
- People at risk of chronic disease
- 1 to 3 year interventions

INTERVENTION TESTING

- Can ageing biomarkers be reversed?
- Specific intervention biomarker connections
- Do biomarkers relate to disease onset / functional parameters?
- Prioritization for large-scale studies

POSSIBLE BIOMARKERS

Molecular

Epigenetic Clock
Inflammatory factors
p16 (Senescence)
Immune Cell Population
Microbiome
Telomere Length

AI

Digital

Facial Pattern Recognition

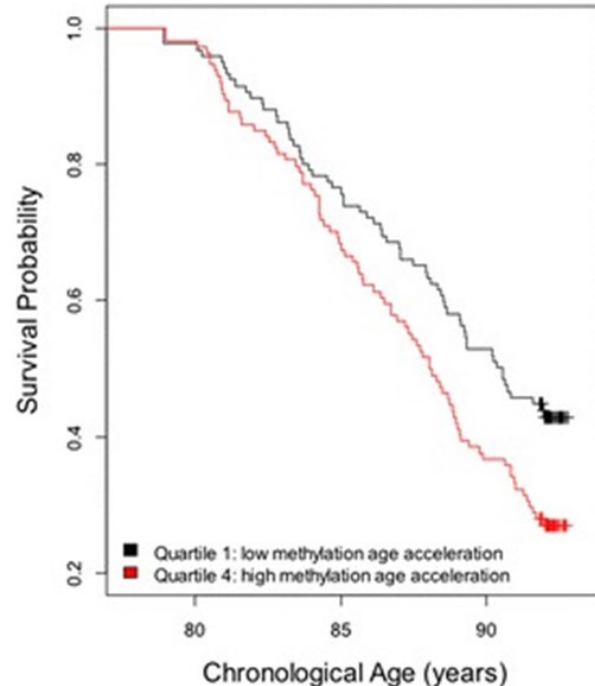

Sensors/Apps to measure:
Activity, Accelerometry, Diet,
Sleep, etcl.

Physiological/Functional

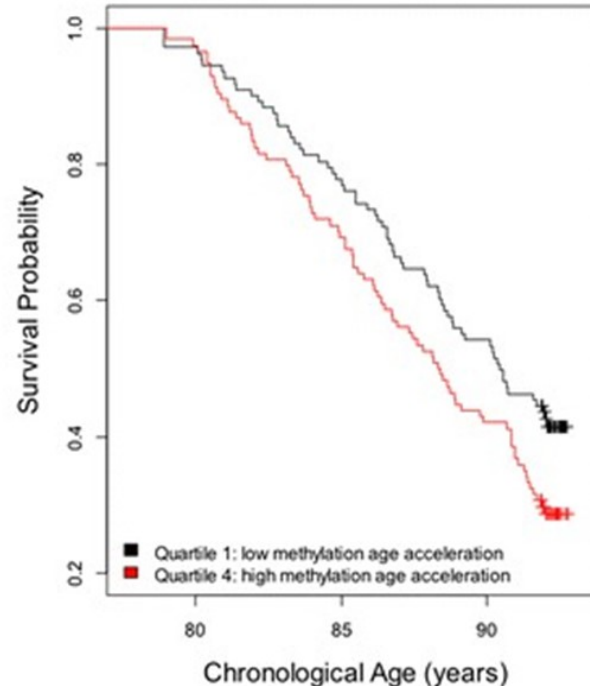

Arterial Stiffness
Walking Speed
Cognitive Tests
Grip Strength
VO₂ Max
Heart Rate Variability

EPIGENETIC CLOCK PREDICTS MORTALITY

LBC1921 Hannum Survival Curves

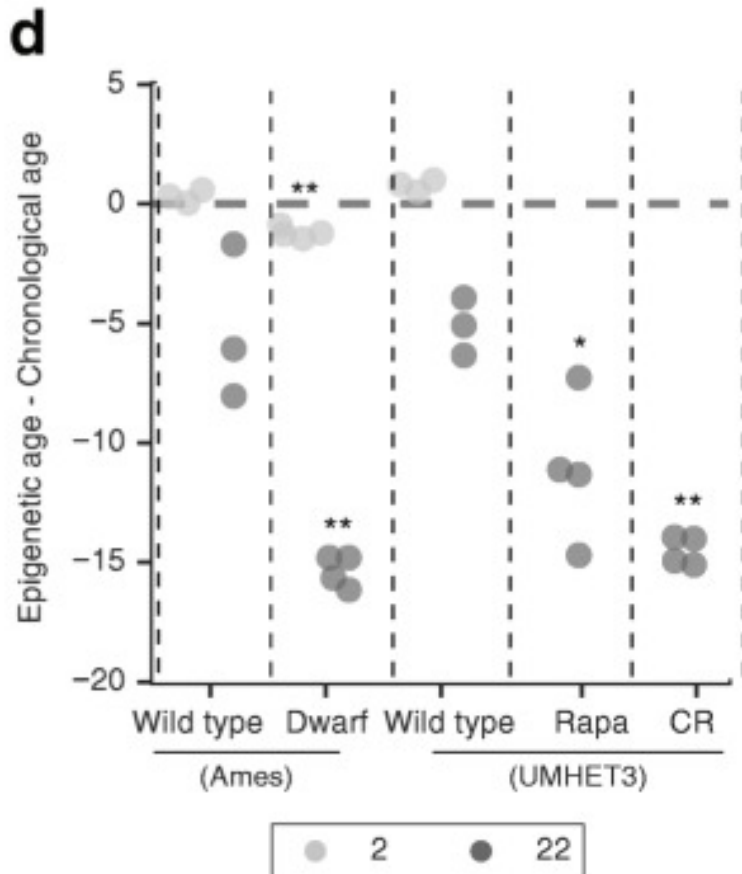

LBC1921 Horvath Survival Curves

[Genome Biol. 2015; 16\(1\): 25.](#)

The association between Δ_{age} (DNA methylation-predicted age minus chronological age) and mortality was examined in four cohorts: Lothian Birth Cohort 1921 (LBC1921) ($N = 446$, $n_{\text{deaths}} = 292$), Lothian Birth Cohort 1936 (LBC1936) ($N = 920$, $n_{\text{deaths}} = 106$), the Framingham Heart Study (FHS) ($N = 2,635$, $n_{\text{deaths}} = 238$), and the Normative Aging Study (NAS) ($N = 657$, $n_{\text{deaths}} = 226$).

LONG-LIVED MUTANTS HAVE A SLOW CLOCK

Wang et al. *Genome Biology* (2017) 18:57
